Science Lesson: Snowy Weather/Winter

During the Christmas Holidays did you see the snow? How did you feel? What did you do? Did you like it? Why? If you have any pictures send them to Miss Wheeler or Miss Matts emails, we would love to see them.

We are currently in the season of Winter. The temperature has dropped and we are experiencing a change in the weather. Today we are going to focus on snow.

Here are some cool facts about snow:

- Snow is ice crystals (frozen liquid water) that falls from a cloud.
- Snow is made from little water vapors in the air which before they turn into water, they freeze and form crystals of ice.
- Snow is clear, but it appears white with the way light reflects off ice crystals.
- Each snow flake can have as many as 200 crystals.
- Snowflakes are complex, they have a large variety of shapes and designs. No two snowflakes are exactly the same.
- While it can be too warm to snow, it's never too cold to snow.
- Heavy snowfall is called a snowstorm.
- A blizzard is when there is a snowstorm and strong winds.

Task

Can you think of and write at least three facts about snowy weather.

Then can you write two sentences telling me different activities you could do in the snow.

Finished? Draw a picture of you having fun in the snow.
