LO: I can subtract using a number line.

Fluency - marbles in a jar.

This is a number line to 10.
When we subtract using a number line, we find the first number in the equation. The next numeral in the equation shows us how many jumps to subtract. In this case we put our finger on 5 then move 2 jumps to the left.
Why do we move to the left?
When we subtract, the amount gets smaller, closer to zero.

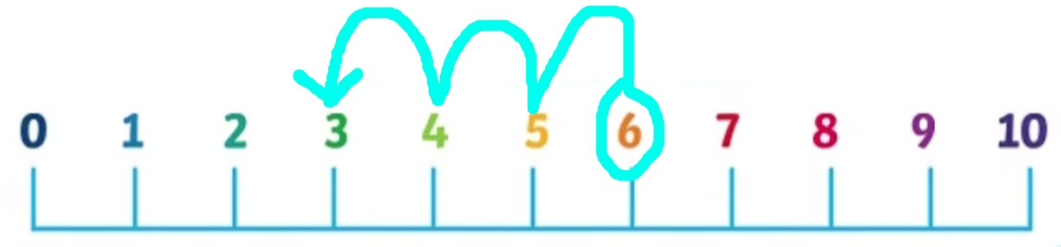

5 - 2 = 3

Now you try:

6 - 3 =

Check:

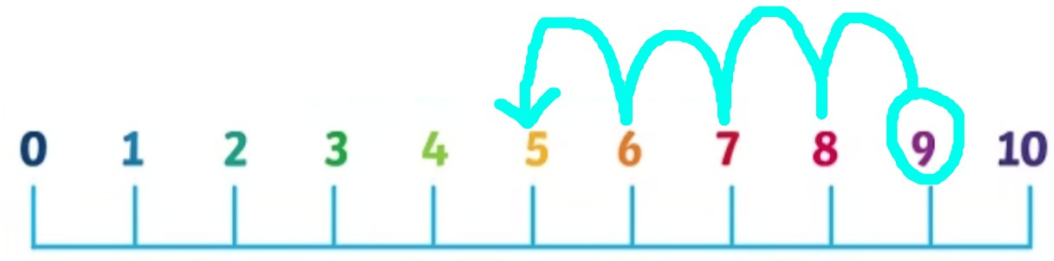

6 - 3 = 3

Now you try:

9 - 4 =

Check:

9 - 4 = 5

Activity:

Now complete these equations in your book using your numberline. You may need help from your grown up to draw the numberlines in your book. Alternatively you may choose to just make one numberline that you can use without drawing on it. You can write the number sentences on your own.

6 - 2 =

4 - 3 =

9 - 4 =

6 - 5 =
