Wednesday 3rd February 2021
LO: I can add using a number line.

Fluency – Subitising

Example:

Get your child to read the number sentence. Place your finger on the first number in the sum.
Then add on 3 by jumping to the next numeral.
The numeral that you land on is the anser, how many altogether.
Note – we jump to the right when we are adding because the amount is getting larger.

$$2 + 3 = 5$$

Draw or print your own number line and use it to find the answer to these sums.

$5 + 5 =$

$9 + 1 =$

$6 + 2 =$

$2 + 3 =$
