Thursday 4th February 2021
LO: I can add using a number line.

Fluency – Subitising

Example:

Get your child to read the number sentence. Place your finger on the first number in the sum.
Then add on 3 by jumping to the next numeral.
The numeral that you land on is the anser, how many altogether.
Note – we jump to the right when we are adding because the amount is getting larger.

$$6 + 3 = 9$$

Draw or print your own number line and use it to find the answer to these sums.

$3 + 3 =$

$7 + 2 =$

$1 + 4 =$

$2 + 8 =$
